— SECRET TRAINING

Voice.

A content creation system that writes in your voice. Not AI voice. Yours.

CONTENT CREATOR SKILL FOR CLAUDE CODE

THE PROBLEM

Every session starts from *zero*.

You open Claude Code. You start writing content. And every single time, you have to explain who you are, how you sound, what your audience cares about, and which patterns work.

The output sounds like AI wrote it. Because AI doesn't know you yet.

This skill fixes that permanently.

WHAT YOU GET

Three tools that work *together*.

01

/setup-voice

One-time setup. Interviews you or analyzes your best content to build a voice profile that persists across every session.

02

/content-create

The main workflow. Posts, emails, articles. Approval gates at every step. Proven copywriting principles baked in.

03

/humanize

Standalone cleanup. Paste any text and it strips out every AI writing pattern before anyone sees it.

STEP ONE

It learns how you *sound*.

Two ways to build your voice profile. Pick whichever fits.

A

Paste your content

Share 5-10 posts or emails you're proud of. The system analyzes your tone, rhythm, vocabulary, hooks, and personality traits.

B

Answer 8 questions

Starting from scratch? The system asks about your niche, audience, tone preferences, and the creators you admire. Takes about 10 minutes.

C

Both

Paste content and answer questions. The analysis plus your input creates the most accurate profile.

THE WORKFLOW

You approve every *step*.

01

Brief intake

Tell it your topic, audience, platform, and goal. It asks clarifying questions about angle and tone.

02

Hook generation

10-20 hooks scored on 7 criteria. Curiosity, specificity, voice compliance. You pick the one that hits.

03

Full content draft

Writes the post, email, or article in your voice. Runs two quality checks automatically before you see it.

04

Organized output

Everything saved to clean folders. Hooks, brief, and final content. Ready to publish.

QUALITY CHECKS

Two passes catch what you'd *miss*.

Every piece of content runs through both checks before you see a single word. The AI patterns get stripped out automatically.

CHECK 01

Slippery slope

Every sentence pulls the reader into the next. No isolated paragraphs. Bridge sentences between every idea shift.

CHECK 02

Negative parallelisms

"No X. No Y. No Z." gets caught and rewritten into natural sentences every time.

CHECK 03

AI vocabulary

"Game-changer", "seamless", "unlock", "revolutionary" and 9 other AI words get stripped on sight.

CHECK 04

Hedge language

"Maybe", "might", "potentially", "I think" all get removed. Your content states facts, not opinions.

CHECK 05

Rhythm variation

Same-length sentences feel algorithmic. The pass varies sentence length so it reads like a human wrote it.

CHECK 06

+ 6 more rules

Em dash overuse, rule of three, sycophantic tone, fragment openers, duplicate subjects, bolded headers.

BUILT-IN FRAMEWORK

Sultanic copywriting principles come *loaded*.

Proven mechanics from Alen Sultanic baked into every piece of content the skill creates. You don't need to learn them. The skill applies them for you.

01	4-line block rule	Never more than 4 lines per paragraph. The eye scans for density before the brain reads for meaning.
02	"Install" tweak	Replace "learn" or "discover" with "install." It implies zero effort and instant utility.
03	"In 2026" tweak	Add the current year to headlines to double conversions. Answers the question: does this still work?
04	"Different" tweak	In saturated markets, don't promise better. Promise different. Reframes the entire category.
05	Away to Towards	Start with pain. Shift to aspiration in the final 20-30%. The arc that makes people buy and stay.

SULTANIC PRINCIPLES

INSTALLATION

One sentence. That's *it*.

Paste this into Claude Code:

```
Install the content-creator plugin from
github.com/tomaibuilder/content-creator-
skill
```

Claude Code installs the plugin automatically. Then run /setup-voice to build your voice profile.

That's the entire setup. Your voice profile persists across every session. Updates are automatic. You're ready to create.

GET STARTED

WHAT CHANGES

Content that sounds like *you* wrote it.

Because the system learned your voice, applies proven copywriting mechanics, and strips out every AI pattern before you see the draft.

01

Your voice

Not generic. Not corporate. Not "AI-sounding." Your actual patterns, your vocabulary, your rhythm.

02

Proven mechanics

Sultanic principles handle the persuasion. Slippery slope keeps readers moving. You handle the ideas.

03

You stay in control

Approval gates at every step. Nothing publishes without your sign-off. The skill proposes, you decide.
